To My Teacher
PROFESSOR ALBERT T. CLAY, PH.D., LL.D., LITT.D.
IN
GRATEFUL APPRECIATION

PREFACE.

The Yale Babylonian Collection contains at the present time about ten thousand tablets, about half of them belonging to the period usually referred to as that of the First Dynasty of Babylon, in the latter part of the third millennium B. C. A large number of the Yale texts are dated in the Larsa Dynasty, whose power in Babylonia was brought to an end by Hammurabi's conquest of this kingdom. The kings of Larsa and the length of their reigns are known from the dynastic tablet published in 1915 in *Miscellaneous Inscriptions in the Yale Babylonian Collection* (Yale Oriental Series, Babylonian Texts, Vol. I).

In this large collection of texts of this period there is a group of one hundred and thirty-six which were found at Mugheir, or Muqayyar, on the site of the ancient city of Ur. The first one hundred and ten texts in the present volume have been selected from this group, and form the first considerable number of texts to be published from this site.

The remaining one hundred and forty-three texts have been selected from the large number of tablets in the Yale Babylonian Collection coming from Senkereh, the site of the ancient city of Larsa (the Biblical Ellasar of Gen. 14:1). The texts in this second group have been chosen with the purpose of collecting the data offered by the Yale tablets for a study of the Dynasty of Larsa, which covers a period of more than two hundred and fifty years in the latter part of the third millennium B. C., and which was for a time the ruling power in southern Babylonia, until its sovereignty was brought to an end by the rise of Babylon and the conquest of Larsa by Hammurabi, the great king and lawgiver of Babylon (called in Gen. 14:1 Amraphel, king of Shinar).

An attempt has been made to include most of the valuable texts in the Yale Collection which are dated in the reigns of the Larsa kings previous to the beginning of the reign of Rim-Sin, the last king of the dynasty (who is regarded by some as Arioch, king of Ellasar, mentioned in Gen. 14:1). To these have been added one text of each of the first thirty years of Rim-Sin's reign, and a few texts containing representative date formulae of the last thirty-one years of his reign, a period which was known as the Isin era because the dates refer to the number of years after the fall of the city of Isin, an event which marked the rise of Larsa to the suzerainty of southern Babylonia. In some cases where no complete or unmutilated date could

YALE BABYLONIAN TEXTS, VOL. V

be found, it has been necessary to copy more than one text of a given year of Rim-Sin. In a few cases, where tablets were badly injured, or where they were so large that they would have required too much space, only the date formulae have been copied. There have also been included a larger number of texts of four of the years of Rim-Sin, probably the fifth year to the eighth year inclusive, two of which are designated by formulae which have hitherto been regarded as of Sin-idinnam.

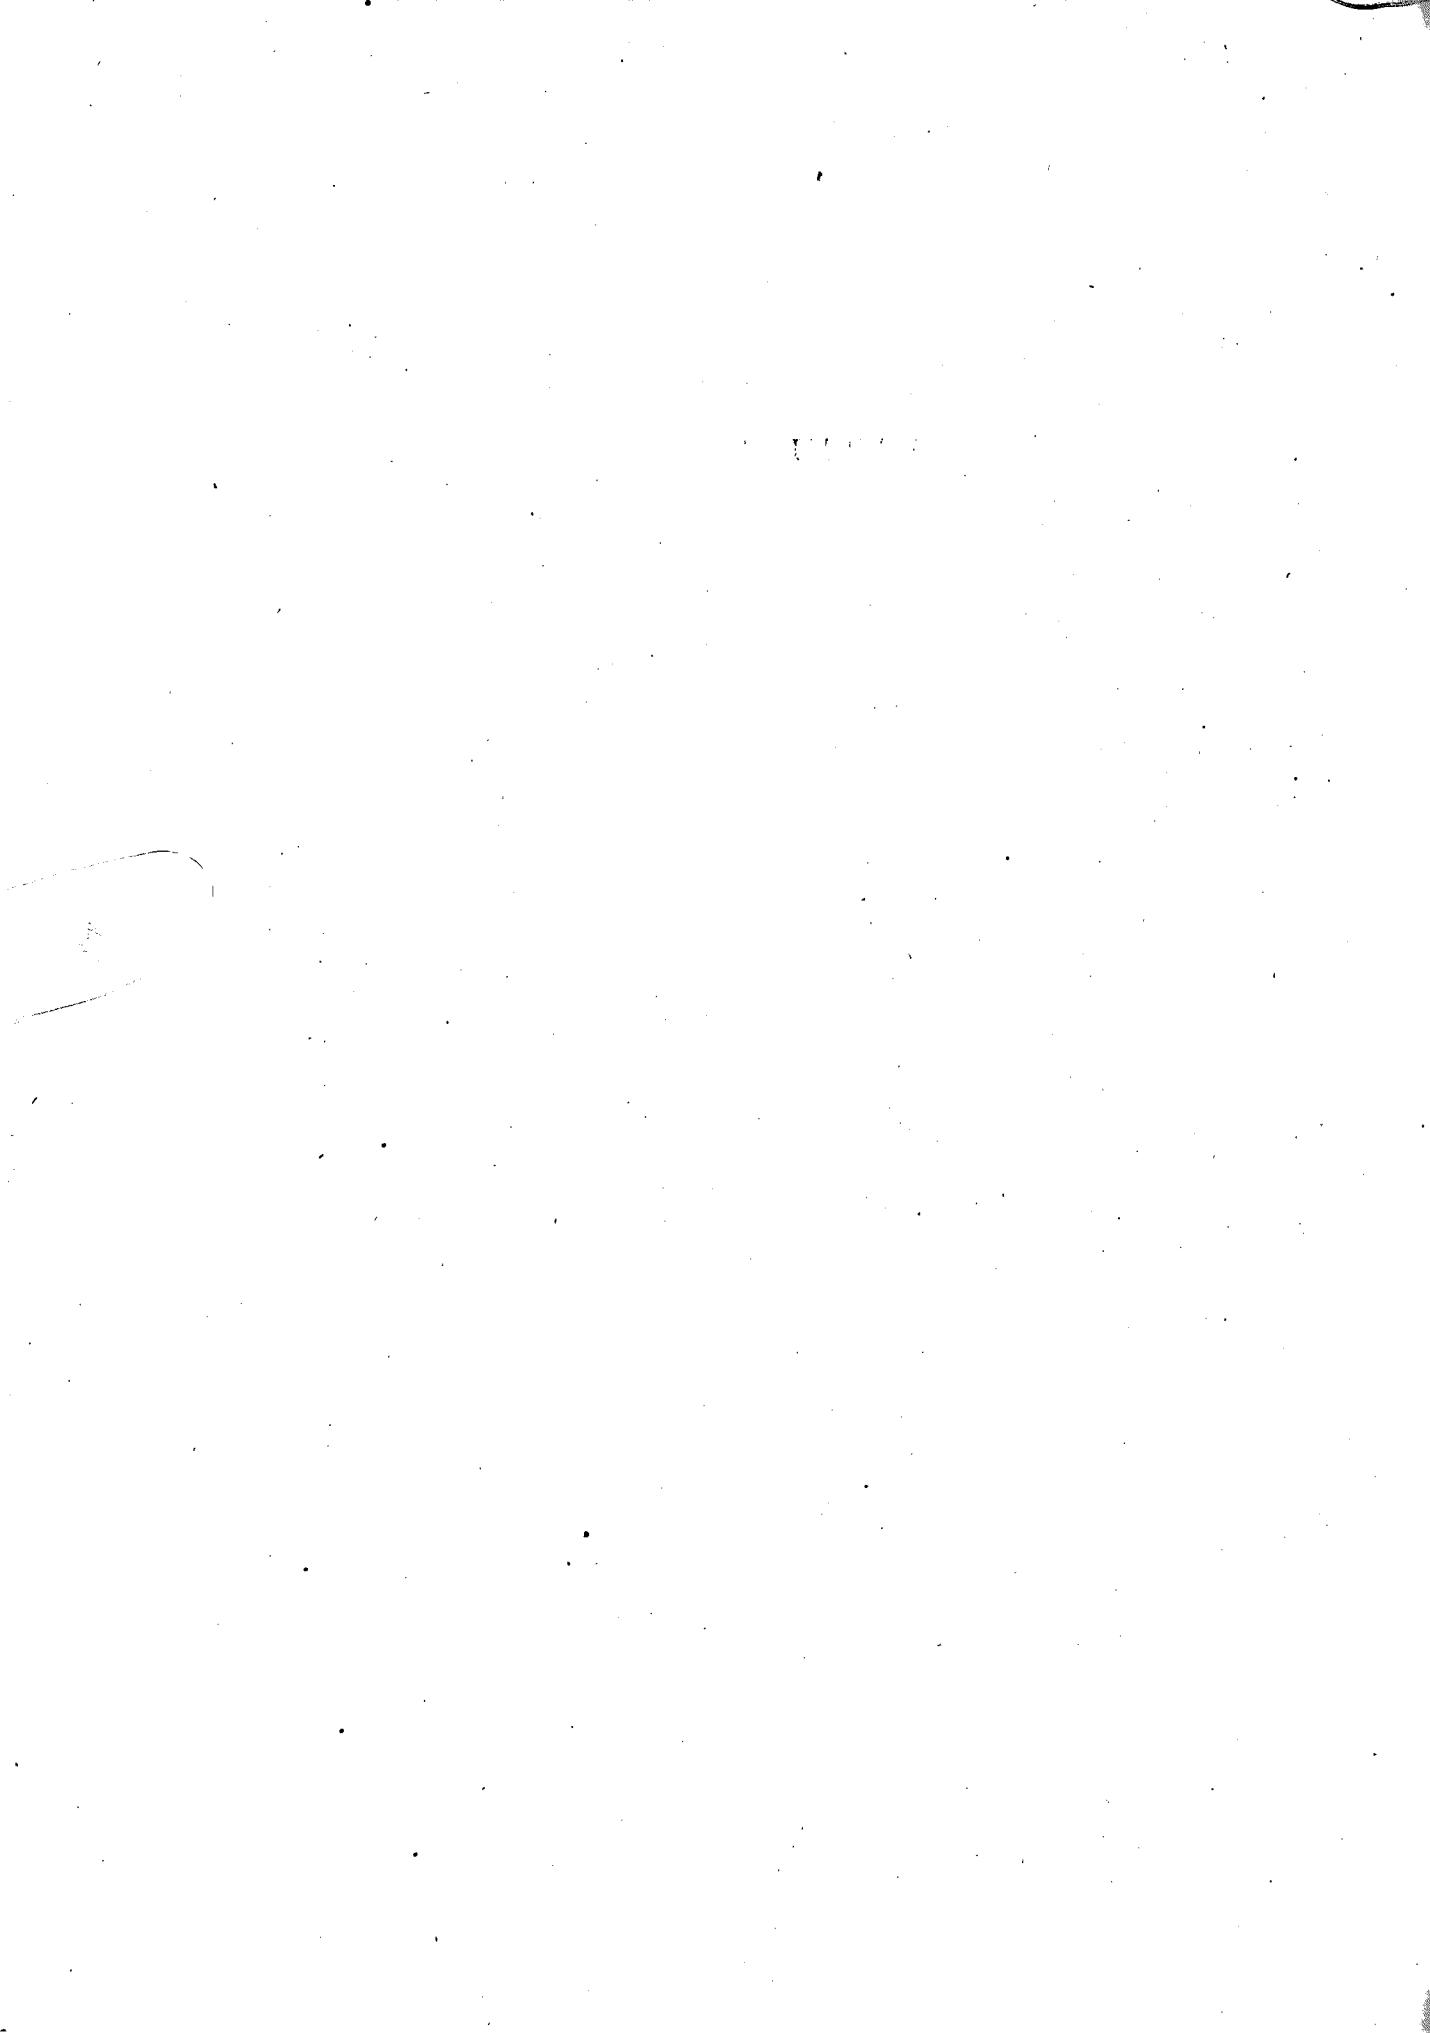

I desire to express my gratitude and appreciation to Professor Albert T. Clay, under whose direction I have been permitted to study, for his unfailing kindness and generosity in making my work possible. I take this opportunity of expressing my thanks also to Professor Charles C. Torrey, Professor George A. Barton, Dr. James B. Nies, and Dr. Clarence E. Keiser, a member of the Yale Babylonian Seminary, for valuable help and suggestions. It gives me pleasure to thank also in this way my friend Deaconess Ethel Percy, who has devoted much time and labor to assisting me with tedious details in connection with my manuscript, as well as Miss Lucille Graham, who kindly assisted in arranging the catalogue of the texts.

ETTALENE M. GRICE.

**RECORDS FROM UR AND LARSA
DATED IN THE LARSA
DYNASTY**

INTRODUCTION.

There are two kinds of business documents in this volume, Nos. 106–149, 242, and 253 being legal contracts, the rest being temple records of various kinds, from brief notes to elaborate inventories.

The contracts include deeds for lands or houses; promissory notes for grain, oil, or silver; partition contracts; and agreements regarding the sale or hire of slaves;—No. 135 even recording the purchase of the right to serve as priest for five days. (For a full description of the contents, see the Catalogue.)

The temple records cover a great variety of subjects, including inventories of the large flocks of sheep which belonged to the temples, and records concerning receipts at the temple or payments from the temple property, referring to gold, silver, dates, wool, grain, bitumen, etc. Hardly any two of them are of exactly the same nature.

Nearly all the texts in the volume are written in Sumerian, or in a mixture of Sumerian and Semitic in which Sumerian predominates. Yet there are a few exceptions to the rule, Nos. 90, 108, 110, 179, 224 (?), 231, 234, and 239, for example, being Semitic except for the date formulæ.

It is interesting to note that some of the numerals were probably called by their Semitic names. For in the texts from Ur the scribes occasionally wrote in full the Semitic loan-words for 1000, *li-im* (Nos. 19:30; 30:39); 100, *me-at* or *me-a-at* (Nos. 5 VII:17; 19:32, 33; 30:39); and 60, *šú-ši* (5:8, 32; 7:9; 101:1). In the Larsa tablets the totals are occasionally named in a similar way, though for 1000 the sign *li* is used, for 100 the sign *me*. (See Nos. 196:9; 208 III:13, 19; IV:2; 212:69, etc.)

The texts from Ur are nearly all official records from the principal temple of the city, *E-nun-mah*, the temple of the moon-god Nannar or Sin and his consort Ningal. But there are five contracts, Nos. 106–110, which are similar to the contracts from Larsa. No. 98 is possibly an exercise tablet. On any other hypothesis it would be difficult to understand the large number of erasures and the fact that the salutation of a letter appears on one side of a tablet the other side of which contains a list of women's names. This text, together with No. 105, an exercise tablet containing names of places, suggests that there was probably a temple school at Ur like the one at Nippur. The many exercise tablets among the large collection of tablets from Larsa in the Yale Babylonian Collection proves the existence of such

a school at Larsa. It seems likely that there were schools in connection with all the principal temples in Babylonia. The Larsa texts are similar in general character to those from Ur, though somewhat more varied in form and subject matter.

Several different standard weights are mentioned among the texts. In the Larsa texts are used the standard of the merchants (No. 154:2, 6, 8, 11) and the standard of the temple of Nannar (No. 122:11). In No. 15 I:3, from Ur, the standard shekel is that of the god Nannar, in No. 69:3, that of the sun-god Babbar or Shamash, the patron god of Larsa. The use in Ur of the standard weight of Shamash and of the date formulæ of the Larsa Dynasty is due to the fact that the documents were written at a period when Ur was not independent, but was subject to its neighboring city of Larsa.

Seven texts, Nos. 33, 46, 47, 50-53, record the delivery of sheep to "SA-GAZ, the ideogram used in the Amarna letters for the Habiri. Perhaps the SA-GAZ of these texts may have been mercenary soldiers, according to the suggestion of Scheil in the *Revue d'Assyriologie* XII, pp. 114, 115.

The purpose of the series being mainly the presentation of the texts that they may be accessible to scholars, a full discussion of the texts, transliterations, and translations are omitted. Nevertheless certain points of unusual interest may be briefly mentioned.

A list of gods, including also some epithets, is included for the convenience of those who are interested in the study of the gods of the period. In any effort to use the texts in the present volume to determine the gods most venerated in southern Babylonia during the latter part of the Larsa Dynasty, it should be remembered that Texts 1-110 are from Ur, according to both the testimony of those from whom they were bought, and the contents of the texts themselves; while Nos. 111-253 are for the most part from Larsa. It is noteworthy that the personal names contain West-Semitic gods. These gods, and other Amorite elements in the personal names, show that there were at this time many Western Semites in southern Babylonia, as well as in Babylon and other cities farther north. Still more interesting is the fact that the god Marduk, who a few years later was made by Hammurabi the head of the Babylonian pantheon, is not once mentioned in these texts. In spite of the fact, shown by the variety of gods in the names, that the people of Ur and Larsa had wide intercourse with other cities and countries, they had not yet felt the quietly growing power of Babylon, which within a few years was raised by its great king Hammurabi to a position of such importance that its name was given to the entire land.

It has been very difficult to identify with any of the signs which were commonly used to describe lambs, the sign , found after *sal-sil* and *sil* in most of the lists

of sheep. On account of the frequency with which the sign appears (*sal-sil* 𒊕 and *sil* 𒊕 are, next to *ganam* and *udu-nita*, by far the most numerous kinds of sheep in the lists), it must refer to some very common variety of sheep. The form, together with the facts that *nu-ür*, a term which appears constantly in the lists of flocks of the period of the Ur Dynasty, is not found in these Larsa Dynasty lists, and that *sal-sil* 𒊕 and *sil* 𒊕 are mentioned in the lists between the full-grown animals, *ganam* and *udu-nita*, and the sucklings, *sal-sil-ga* and *sil-ga*, leads us to conjecture that this sign is a ligature for *nu-ür*, and means "sterile" or "immature." As evidence that ligatures for familiar phrases were actually in use, we may refer to the expression *lal-ni*, "balance," which is always written as a ligature 𒁶. See Nos. 13:1, 23; 58:7; 168:12; 209:4; etc.

The writing of *guškin*, "gold," in these texts, varies. More commonly than the ordinary *AZAG-GI* is used *AZAG-ZI*. (See Nos. 41:11; 45:7; 140:24; 168:22; *et multa*. Compare in these texts the forms of *GI* and *ZI* used in other connections.) Occasionally we have instead *AZAG-MU*. (Nos. 114:17; 124:26.) The variation may have arisen from the general similarity of the three signs *GI*, *ZI*, and *MU*, or it may be that we have here variants of the *GI* sign. An analogous example of the wide latitude regarding the making of signs in this period is seen in the sign registered as *LAGAB+KUL* in the ideogram for bitumen (Brünnow 11673, 11674). See Nos. 90:2, 4; 231:1, 2, etc.; 234:1, 6, etc.; 239:1, 2.

The sign *e* has the value *rabû*, "to be great." In such passages as Nos. 13:18; 15 I:5; 193:8; 207:7; etc., it must mean "be as great as," "be worth."

The fact that occasionally the names of certain kinds of sheep are included in the inventories of flocks, with blanks before these names indicating that there were no sheep of these kinds in the flocks there listed (see Nos. 5 II:2, 4, 20, 22; IV:2, 4; V:2, 4; 6 II:21, 22) leads us to believe that the scribe copied a regular form, as was done in the Cassite Period. (See Clay, *Bab. Exp.* XV, pp. 96, 111.)

The diagonal marks in No. 15 were not for the purpose of cancellation, because the text is beautifully preserved, and was found in the archives. Perhaps they take the place of check marks,¹ such as those marking separate items in YBC 7260, etc. The marks on Nos. 31, 32, etc., were probably caused by their being tied to objects.

Because of the number and the character of the many Yale texts from Larsa which refer to a certain Balmunamhe, we are led to believe that he was a prominent business man of the city whose private archive has been unearthed. This seems to be indicated by the Yale texts in the present volume, in twenty-five of which he

¹ See Clay, *Bab. Exp.* XIV, p. 16.

appears, not as a witness, but as an active party to the transactions.¹ Ten of these texts record his purchase or exchange of lands or houses; in six he appears as the purchaser or owner of slaves; in four he lends grain or silver; in two he is mentioned as the official in charge; in three he is represented as the owner of property, one of these texts (No. 132) being a tax receipt. It is to be noted that in Nos. 122 and 181 he is mentioned with his father, Sin-nûr-matim. The documents recording all these transactions are such as a business man would keep among his own records, while those recording his selling property or borrowing money would have been kept by the other party to the contract. His activity was continued during a long period, for his name occurs on Yale documents from the reign of Warad-Sin and throughout the reign of Rim-Sin, the latest which has been observed (YBC 6756) being dated in the forty-second year of Hammurabi.

A very common form of the oath formula in contracts from Ur and Larsa of the Larsa Dynasty is like that of the contracts from Nippur of the same period (see Chiera, *Legal Documents from Nippur*, p. 18), *mu lugal-bi*. Yet there is some variation in the Ur and Larsa contracts. Of the contracts among the present texts, sixteen have no oath formula, thirteen have *mu lugal-bi*, six have *mu "Nannar "Babbar ù* (the name of the king) *lugal*. Two case tablets, Nos. 121, 125, have *mu Warad-⁴Sin lugal* on the case and *mu lugal-bi* on the tablet, while a third case tablet has *mu lugal-bi* in both places. No. 130 has *mu Warad-⁴Sin lugal*, No. 124 has the oath by two kings, Warad-Sin of Larsa and Sin-iribam of Erech,² while in No. 127 the oath is by Warad-Sin and his father, Kudur-Mabuk. With the data at hand it is possible to come to no conclusion other than that at Ur and Larsa there was no adherence to a single stereotyped form of oath.

THE DATE FORMULÆ.

The chief importance of the texts assigned for publication here lies in the historical data furnished by the date formulæ. The full discussion of the chronological material of these and other texts of the Larsa Dynasty is to be found in the monograph entitled "Chronology of the Larsa Dynasty" (*Yale Oriental Series, Researches*, Vol. IV, Part 1); it seems appropriate, however, to mention here a few facts concerning the new chronological material of this volume. For the names of the kings and the length of their reigns, see the dynastic tablet published in Clay, *Miscellaneous Inscriptions*, p. 30 f.

¹ See List of Personal Names for references.

² This new king of Erech, who bears the same name as one of the kings of Larsa, is of especial interest.

All the texts in the volume which can be placed with certainty are from the time of seven rulers of the Larsa Dynasty, from Nûr-IM to Rîm-Sin. About twenty of the date formulae have not appeared before, others enable us to expand or correct the readings of formulæ which have been previously published.

In the first number of the *Revue d'Assyriologie* for 1918, Thureau-Dangin will publish the inscription of a four-sided prism which if uninjured would have given a complete scheme of the Larsa Dynasty. In its perfect form, it gave for the first four rulers only the length of their reigns; beginning with the fifth king, it gave the formula for each year, to the end of Rîm-Sin's reign. The lengths of the reigns of the first four kings, which are broken from the prism, can be supplied from the Yale dynastic list, mentioned above. Unfortunately the second face of the prism is entirely destroyed, and the inscription is otherwise considerably injured. An advance copy of most of the text, which has been kindly sent by Thureau-Dangin, shows that there are preserved more or less complete formulæ for the years from the beginning of Gungunu through the twenty-fifth year of Sumu-ilu, and from the seventh¹ year of Rîm-Sin to the close of his reign. In contrast to most date-lists, the prism gives full formulæ, several of those of Rîm-Sin occupying six or seven lines each. There is thus one gap of about fifty-four years, which together with the many fragmentary formulæ of the prism, must be supplied, as far as possible, from dated documents of the period.

Of the fifty-four years which are missing from the Louvre prism, twenty-nine have been restored, some of them tentatively, from published texts or new formulæ from Yale tablets. Several unidentified formulæ of the Larsa Dynasty probably belong also in this gap, but cannot be definitely placed until more evidence is discovered. (See Catalogue.)

Though according to the dynastic list published by Professor Clay, Sili-IM reigned only one year, two date formulæ mention him. Besides the usual formula for his first year (see No. 117), eight texts² are dated *mu Si-li-^aIM nam-lugal-ta sîr-ra*. Since *sîr* has the value *nasâhu*, "to wrench out," the meaning is probably "The year when Sili-IM was deposed from the kingship." Since all the texts which bear this year-name are dated in the twelfth month, while the one which refers to Sili-IM's first year was dated in the ninth month, it seems reasonable to suppose,

¹ Since the total number of years in the reign is given by the prism as sixty, whereas the Yale dynastic list gives sixty-one, the testimony of the prism would be that the first formula on the fourth face of the prism is that of the sixth year. However, since there are two formulæ of Rîm-Sin for which there is no place in his reign except the fifth and sixth years, it seems best to regard the number of years given by the Yale tablet as correct.

² Nos. 8-11, 54-57.

accordingly, that Kudur-Mabuk conquered Larsa and placed his son Warad-Sin on the throne during the last four months of the year; and that he preferred not to change the year-name entirely, but allowed it still to contain the name of Šili-IM, stating that he was no longer king. In this case "The year when Šili-IM was deposed from the kingship" might be called the accession year of Warad-Sin, as distinguished from his first (complete) year, a terminology used in the Neo-Babylonian Period.

A new formula, found on twenty-two Yale texts, reads more or less fully "The year when he built the lofty platform for the temple of Shamash in Larsa." This is proved to be of Warad-Sin, not in the usual way by the mention of the king in the date or the oath formula, but by the seal impression. No. 165 states that it is sealed with the seal of the king. The seal impression has slight traces of a standing figure, and a clear inscription: "Warad-Sin, king of Larsa, son of Kudur-Mabuk." From this no conclusion can be drawn other than that the new formula is of Warad-Sin.

The greatest single contribution furnished by the temple records to our knowledge of the chronology of the dynasty is given by Nos. 202 and 207, which give us the order of the formulæ for the last five years of Warad-Sin and the first four of Rîm-Sin, his brother and successor. Since in each text the date formulæ occur twice in the same order, and since we know independently of these texts, from oath or date formulæ which mention the name of the king, that the second, third, fourth, and fifth belong to the reign of Warad-Sin (although the order was not known), and that the sixth is the first year of Rîm-Sin, it is possible to conclude that we have here the date formulæ for nine consecutive years, beginning with the eighth year of Warad-Sin, and ending with the fourth of Rîm-Sin. The contribution of these two texts is especially important because they give nine years which have been broken from the Louvre prism, which contains no formulæ of Warad-Sin's reign, but begins, after the missing second face, with a badly mutilated formula for the seventh year of Rîm-Sin.

For the reign of Rîm-Sin the Louvre date-list and the dated business documents of the period furnish abundant material. For the order of the formulæ from the seventh to the thirtieth years of Rîm-Sin we must depend on the date-list; from published texts and the dated tablets of the Yale Collection, which furnish many examples of the formulæ of Rîm-Sin, with many variants, it is possible to restore most of the fragmentary formulæ of the prism, about one third of the formulæ appearing here for the first time. Unfortunately in one or two instances the same part of the formula is injured on the tablets as in the prism, while in three cases

the mutilated form of the prism suggests a fuller form than has yet been found on a dated tablet.

A number of conclusions concerning the dates of Rîm-Sin's reign which had been reached before the contents of Thureau-Dangin's prism were known, are confirmed by the prism.

For example, it had been concluded from evidence such as is offered by a text which contains records for three years; by the names of persons mentioned in the texts, especially shepherds and a certain Balmunamhe,¹ whose private archive seems to have been unearthed by the Arabs; as well as from the general appearance of the tablets, that two date formulæ which have hitherto been regarded as of Sin-idinnam, record achievements of Rîm-Sin instead.² The new date-list of Thureau-Dangin confirms this conclusion, showing them to be the formulæ for the seventh and the eighth years of his reign.

Another fact of more general interest can be learned from the two texts which record formulæ for nine and five years respectively., It has been questioned by scholars when the date formula for a year was determined. Now text No. 207, dated in the first month of the fourth year of Rîm-Sin, carries the record as far as the year then beginning; while No. 202, dated in the twelfth month of the third year, refers to grain for the succeeding year, using the date formula for the fourth year. Hence it is shown conclusively that at some time during the twelfth month (the exact day is not mentioned), the date formula for the succeeding year had been determined and announced, so that it was used by the scribe. How much earlier the date formula for the following year may have been fixed can be determined only by the discovery of new data.

The Yale texts furnish three synchronisms between kings of Larsa and those of other dynasties. The oath formula of No. 124 mentions a hitherto unknown king of Erech³ as a contemporary of Warad-Sin. The formula for the fifteenth year

¹ See above.

² The formulæ are:

*mu ē⁴Bar-ul-e-gar-ra šag Adab⁴ mu-un-dú-a
ù alam guškin⁴Šin-i-din-nam lugal Ararma⁴(-ma) mu-un-dím-ma*

The year when he built the temple of Bar-ul-e-gar-ra, in Adab, and finished a golden statue of Sin-idinnam, king of Larsa;

and *mu ká-gal a-a-a-bi Maš-gan-šabra⁴ mu-un-dú-a
ù e a-šág šág-tum-ma 4 kaskal-gid mu-un-si-ig-ga*

The year when he built the city gate and its adornment in Mashganshabra, and enlarged the canal of field and meadow for four double leagues.

They have been regarded as belonging to the reign of Sin-idinnam, as stated; the former because of the reference to his statue, the latter because it has been regarded as a variant of the formula

mu⁴Šin-i-din-nam bád-gal Maš-gan-šabra⁴ ba-dú

The year when Sin-idinnam built the great wall of Mashganshabra.

³ See above.

of Rîm-Sin (see Nos. 141, 147) celebrates his victory over the armies of Erech, Isin, Babylon, Rabiqum, Sutium, and Warad-NE-NE, king of Erech. Though this formula is badly mutilated in Thureau-Dangin's prism, the full form is found on several Yale documents. Accordingly we have the relative position of Sin-iribam, a contemporary of Warad-Sin, and Warad-NE-NE, who was reigning in the fifteenth year of Rîm-Sin, welcome new material for the Dynasty of Erech, which like the Larsa Dynasty, was unfortunately broken from the king-list found at Nippur.

Another new date formula (see Text No. 3), which cannot yet be placed, reads:

mu ugnim Nim^{ki}-ma ù Za-am-bi-ia lugal I-si-in^{ki} ^{gi}tukul ba-an-sig.

The year when with his weapon he smote the army of Elam and Zambia, king of Isin.

When it is learned to what reign this formula belongs, we can determine positively the question of the overlapping of the dynasties of Larsa and Isin, and calculate accurately the chronology as far back as the beginning of the Ur Dynasty. It is possible that this formula belongs to the reign of Sin-idinnam.

As stated above, in the monograph *Chronology of the Larsa Dynasty* the reasons for some of these and other conclusions will be given more fully, and there will be a more complete discussion of the materials for reconstructing the history of the dynasty.

NAME INDICES.

The following abbreviations are used: b., brother; d., daughter; f., father; gf., grandfather; gs., grandson; h., husband; m., mother; p.n., (?) perhaps not a personal name; w., wife; YBC, Yale Babylonian Collection. ' is written before some feminine names: other names which are probably feminine are given without being so indicated.

CATALOGUE.

The following system of notations and abbreviations for the list of dates has been adopted: Figures indicate known years of definite reigns; as, *W-S 1* is the first year of *Warad-Sin*. Dates with Roman letters, like *W-S a*, belong to *Warad-Sin*; but the order in the reign is undetermined. Dates with a Greek letter, like *W-S a* are only conjecturally assigned to the reign. *U a*, *U b*, etc., indicate unidentified formulæ which probably belong to the *Larsa* Dynasty.

Text.	Reign.	Year.	Month.	Day.	YBC.	Description.
1	<i>Sin-idinnam(?)</i>	a	7	..	4752	Record of sheep and their shepherds.
2	<i>Sin-idinnam(?)</i>	a	12	..	4746	Record of sheep belonging to the temple of <i>Nannar</i> .

1

This image shows a horizontal strip of ancient Chinese oracle bone script, likely from the Shang or Zhou dynasties. The script is written in a cursive, fluid style with vertical strokes and some horizontal lines. There are approximately five columns of characters, each consisting of two or more strokes. The characters are arranged in a grid-like pattern, though the lines are not perfectly straight. The overall appearance is that of a fragment of a larger inscription.

166

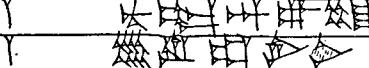

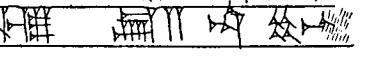

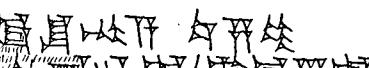

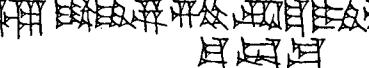

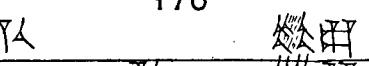

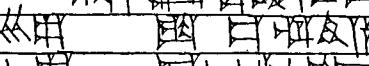

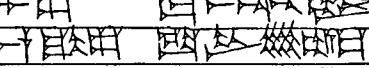

167

168

This image shows a horizontal strip of a bronze vessel, likely a lid or a decorative band. The surface is covered with a dense, hatched pattern consisting of small, irregular shapes that create a textured, almost embossed appearance. The strip is relatively narrow and spans across the width of the vessel's rim.

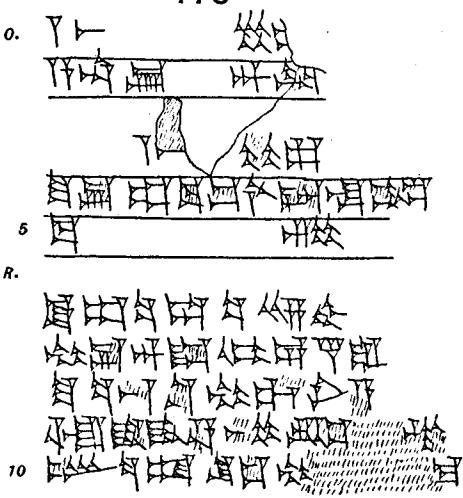

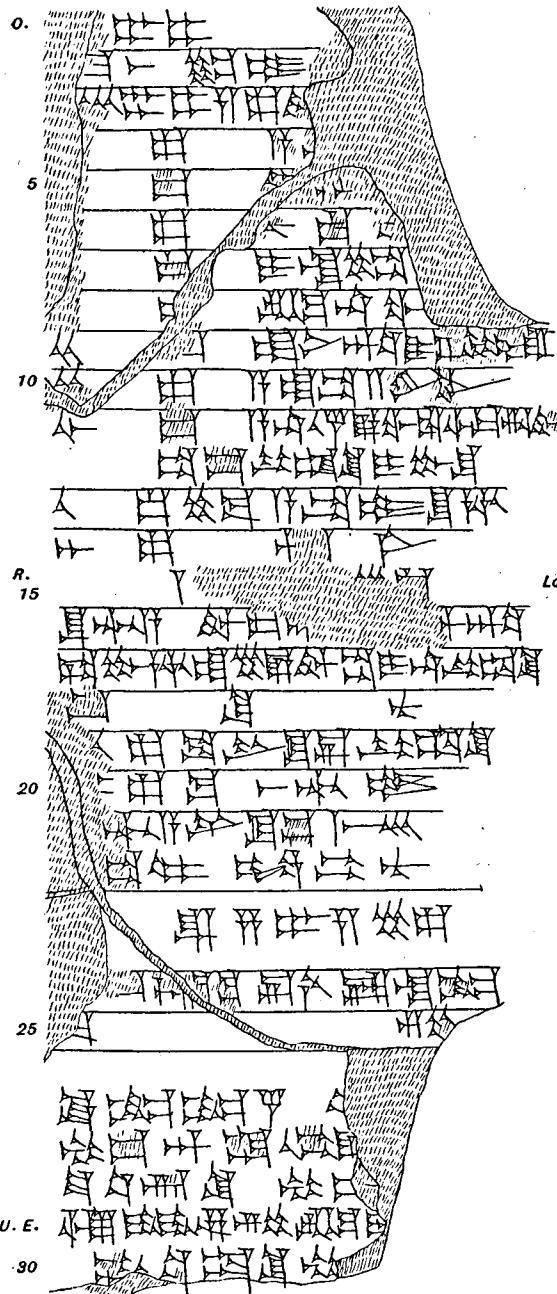

PLATE LXVI

174

175

This image shows a page of handwritten Chinese calligraphy practice. The top section contains the radical '从' (Cóng) repeated several times in a cursive style. Below this, there is a horizontal line followed by a series of characters that all include the '从' radical as a component, such as '纵' (zòng), '丛' (cóng), '纵' (zòng), and '纵' (zòng). The bottom section also features the '从' radical and its variants in a cursive script.

176

- This image shows a page of handwritten Chinese calligraphy practice. The page is filled with horizontal rows of characters written in black ink on white paper. The characters vary in complexity, including some with multiple strokes and others with more fluid, cursive forms. The strokes are generally thick and bold, with some variations in line weight and texture, suggesting different brush techniques or ink saturation. The overall appearance is that of a personal practice sheet or a calligraphy exercise book.

- The image shows a detailed scientific illustration of a fossilized ammonite shell. The shell is elongated and spirally coiled, with numerous small, sharp, triangular denticles or spines along its outer margin. A prominent, thick siphuncular canal runs along the inner surface of the shell, characterized by a series of large, irregular, and somewhat rounded structures called siphuncular tubercles. These tubercles vary in size and shape, creating a textured pattern across the canal. The overall appearance is that of a well-preserved marine mollusk fossil.

186

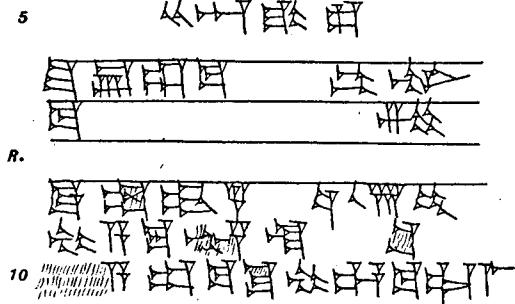

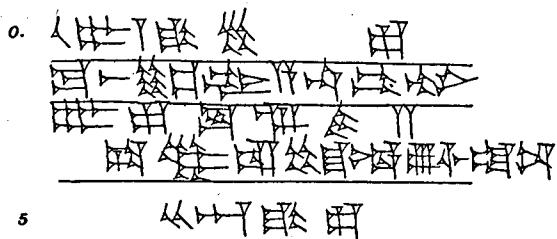

- This image shows a handwriting practice sheet for Chinese characters. It consists of four horizontal rows. The first three rows are labeled with numbers '0.', '1.', and '5.' at the left end. Each row contains several Chinese characters for tracing, followed by a blank line for independent copying. The characters in each row are: Row 0: 一, 田, 父, 二; Row 1: 一, 田, 父, 二; Row 5: 人, 田, 父, 二; Row 6: 人, 田, 父, 二.

193

- This image shows a handwritten Chinese calligraphy practice sheet. The page is filled with horizontal rows of characters, likely for the character '人' (person), written in different styles and with varying stroke orders. The strokes are represented by short lines, and some characters have their radical or component parts highlighted with shading or thicker lines. The text is organized into numbered sections (0, 5, 10, R.) along the left margin.

194

-

195

- This image shows four horizontal rows of Chinese characters, likely from a historical manuscript. The characters are written in a cursive or semi-cursive style. Row 1 contains approximately 15 characters. Row 2 contains approximately 18 characters. Row 3 contains approximately 15 characters. Row 4 contains approximately 15 characters. The characters are arranged in vertical columns within each row.

196

197

- This image shows a handwritten Chinese calligraphy practice sheet. The top section contains two rows of characters with stroke order analysis. The first row includes characters like '四' (Si) and '日' (Ri). The second row includes characters like '月' (Yue) and '日' (Ri). The bottom section, labeled 'R.', contains several rows of characters for practice, with stroke order analysis lines underneath each character.

198

- This image shows a handwritten Chinese calligraphy practice sheet. It includes several horizontal lines for tracing. The first section contains the characters '人' (person), '田' (field), '日' (sun/light), '月' (moon/light), '火' (fire/light), '口' (mouth), '目' (eye), '女' (woman), and '子' (child). The second section contains the characters '日' (sun/light), '月' (moon/light), '火' (fire/light), '口' (mouth), '目' (eye), '女' (woman), and '子' (child). The third section contains the characters '人' (person), '田' (field), '日' (sun/light), '月' (moon/light), '火' (fire/light), '口' (mouth), '目' (eye), and '女' (woman).
